                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gerber H, Hillan KJ, Goddard A;

```

angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCB) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB2488 to AAB24435 represent nucleotide and protein sequences used in the exemplification of the present invention.

AASISIA4-AASISISUA COCOR TO TOWEL NUMBER SECTECTS AND LIABLEMENTATION.

THE PRO POLYPEPTIGES. The PRO polypeptides are useful to detect other. PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation of chondrocytes, the proliferation of articular supporting cells of a cytokine from peripheral blood of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide concludes involved in binding interactions. The polymucleotides encoding PRO polypeptides can be used in assays to identify PRO polypeptides can be used to assays to identify PRO polypeptides can be used to assays to identify PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŝ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                489

                                                                                                                                                                                                                                                                                       The present sequence is one of seventeen nucleic acids encoding PRO polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating cardiovascular, endothelial or angiogenic disorders in a mammal. Examples of these disorders include cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atheroscelerosis, hypertension, arterial restenoiss, Raymaud's disease, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis and lymphangitis. The PRO polypeptides and antagonists are also used to prevent tumour angiogenesis and for treating periodonial diseases. They are also used to stimulate wound healing and tissue regeneration. The PRO nucleic acids, polypeptides and anti-PRO antibodies are useful for diagnosing a cardiovascular, endothelial or angiogenic disorder.

Claim 58; Fig 21A-B; 293pp; English.

The invention relaters to mover numen amiglogenesis-sassolated proceins designated PRO proteins (AAB53064-BE3097), and to nucleic acids encoding PRO proteins. The invention also relates to vectors and host cells PRO protein, PRO antibodies specific for a PRO protein, fusion proteins comprising a PRO nucleic acid, the recombinant production of a PRO protein, PRO antibodies specific for a PRO protein, fusion proteins compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying modulators of PRO expression or activity; diagnosing a cardiovascular. Endothelial or angiogenic disorder, or a Busceptibility to such a disorder by detecting mutations in a PRO gene, or the expression level of a PRO gene within a particular tissue; treating a cardiovascular, endothelial or proteins are are proposed via the administration of a PRO protein, PRO nucleic acid, or PRO agonist or antagonist; a retroviral gene therapy vector comprising or PRO mucleic acid, and methods of inhibiting or stimulating endothelial coll growth, cardiac Hypertrophy or PRO-induced angiogenesis via the administration of a PRO protein, and agonist or an agonist or antagonist thereof or appearance acids, PRO proteins, antibodies against PRO proteins, PRO appearance acids, proporteins, antibodies against PRO proteins, proposition of a production of a proposition of a production of a production of a proposition of a production of a production of a production of a product invention relates to novel human angiogenesis-associated proteins protein of the invention.

The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, and for for identifying agonists or antagonists.

The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the proliferation or differentiation of chondrocytes, and detecting the presence of tumours. The polynuclectide sequences encoding PRO polypeptides, in the generation of stimulating transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ACA03603-ACA03877 represent cDNAs encoding the human PRO polypeptides of the invention.

Note: The sequence data for this patent was obtained in electronic formals. 250 coccocidadicacororox coccadioacca and analox controca 121 AATTCCAGTTTTCCAGCAACAAGAACAGAACGGAGTACAAGATCCTCAGCATGAGAGAA 181 370 AATTCCAGTTTTCCAGCAACAAGGAACAGGAGTACAAGATCCTCAGCATGAGAA 429 TTATTACTGTGTCTACTAATGGAAGTATTCACAGCCCAAGGTTTCCTCATACTTATCCAA 241 Filvaroff E, Gao W; 2 CCCGCCGTGAGTGAGCTCTCACCCCAGTCAGCCAAATGAGCCTCTTCGGGCCTTCTCCTGG 62 TGACATCTGCCCTGGCCGGCCAGAGACGAGGGACTCAGGCGGAATCCAACCTGAGTAGTA 36; Indels 11; Gaps DeForge L, Desnoyers L, Filvaroff E, G. from any of the nucleotide sequences cited above. The nucleic acids and polypeptides are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS (acquired immunodeficiency syndrome), cancer, or diabetic complications. The nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both are useful in tissue typing.

The present sequence encodes a PRO protein of the invention.

88888888888

The invention relates to an isolated mucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 mucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The mucleic acid by polypeptide (nome of 275 secreted or transmembrane proteins). The mucleic acid caid or turber comprises the full-length coding sequence of the DNA deposited under American Type Chilture Collection (ATC) accession number in a list given in the specification. Also included are vectors and host cells for producing PRO proteins, PRO fusion proteins, methods are vectors and host cells for producing PRO proteins, methods for simulating the release of TNP-alpha (tumour necrosis factor alpha) from human blood,

TNP-alpha (tumour of endothelial cells), a method for modulating the release or profiferation of endothelial cells), a method for modulating the uptake of ground for inhibiting the binding of A-peptide to factor VIIA,

TNP-alpha (tumour in a mammal and an oligonucleotide probe derived) Beresini M, ME, Goddard (GETH ) GENENTECH INC. Stewart TA, WPI; 2003-331925/31.
